

# DHL Online Shopper Survey: 95% of online shoppers abandon a purchase if their preferred delivery option is not available

26-09-2023

DHL eCommerce has completed a brand new Global Online Shopper Survey for 2023 and also published a new European Report. To gain profound insights into their e-commerce purchasing patterns shoppers were surveyed from ten countries across Europe and, for the first time from 13 countries across the globe. The Online Shopper Surveys offer insights on where and why they shop cross-border, what they buy and spend, their attitudes to delivery and returns and why sustainability matters to online shoppers worldwide. Major global markets within Europe, the Americas, Middle East and Africa as well as Asia Pacific and China are covered.

"The results of our latest Online Shopper Survey indicates that delivery flexibility and transparency are crucial for customers. But sustainability is also becoming an increasingly important issue, with almost half of the customers even willing to accept longer delivery times. However, the willingness to pay more is still relatively low with 28% - but we are convinced, that this will also change with the growing number of sustainable delivery options and solutions. Our report provides many more valuable insights into what online retailers need to pay attention to, to ensure customer happiness. And, how successful customer journeys can be achieved," says Pablo Ciano, CEO DHL eCommerce.

## Flexibility and plannability are key

Flexible delivery options are vital for online shoppers. 95% of shoppers around the globe report they have abandoned a purchase in the past because a preferred delivery option, such as home delivery or the ability to ship to parcel lockers or parcel shops, wasn't available. The same goes for consumers in Europe. 90% of European shoppers say they didn't complete an online order because the goods couldn't be delivered to a location or a

time that suited them.

Also important for customers is the option to re-direct their deliveries at the last minute. 75% of global shoppers and 72% of Europeans want the flexibility of ensuring their parcel is delivered to another safe place when they're not at home.

Furthermore, around two-thirds of European online shoppers want to know what delivery company handles their parcels before placing an order. 43% would even abandon their cart if they didn't like the delivery provider offered. When looking at consumers around the world, a similar picture emerges. 70% say knowing about the delivery company is very important, and 43% would cancel an online purchase if they didn't trust the delivery partner. The number in regions such as the Middle East and North Africa even rises to 61%. In summary, a range of delivery options plays a crucial role for online shoppers in Europe and around the world.

## Social media shopping and subscription services are on the rise

Social media channels are becoming increasingly important as a sales channel for retailers. Seven out of ten shoppers

worldwide use social media for shopping inspiration. China and Thailand lead the ranking regarding social media shopping. More than half of the respondents say they regularly shop on social media platforms, versus a global average of 28%. In Europe, 48% of customers have purchased via social media in the past, with Facebook and Instagram being the lead channels. However, TikTok is noticeably gaining ground here, and the popularity of streaming videos makes YouTube an important player in the social media sales market, too.

Also on the rise are subscription services. 31% of Europeans say they have at least one subscription with an online retailer, with beauty and food subscriptions being the most popular. Across the globe, 36% of shoppers have a subscription service to an online retailer. Beauty products are the No. 1 subscription, followed by food and clothing.

### **Shoppers want to go green and 49% would even accept longer delivery times**

Sustainability continues to be an important aspect for online shoppers. 64% of Europeans say that shopping online sustainably is important to them, but only one in five are willing to pay extra for a greener delivery - expecting retailers to pay for the additional costs. However, 49% of European customers are prepared to accept longer delivery times if that means that the delivery is more sustainable. Viewed globally, a similar picture appears. More than 70% of respondents say that sustainability is important to them when they shop online, and almost half would be

prepared to wait longer for their deliveries. But, given a choice, only 28% see fit to pay more for a more sustainable delivery.

### **Customers enjoy variety of payment options**

E-commerce retailers across the globe offer a variety of payment options. 85% of European online shoppers and 85% of global shoppers are satisfied with the payment options offered at checkout. Credit or debit cards and digital wallets such as PayPal are still most popular, but BNPL (buy now, pay later) options are on the rise in Europe, particularly in Sweden, the Netherlands, Germany and Austria, while Cash on Delivery still plays an important part in large parts of the world such as the MENA region (32%), the Czech Republic (22%) and Italy (15%).

The DHL Online Shopper Survey 2023 provides insights into the international e-commerce industry, specific markets, and consumer preferences. DHL eCommerce commissioned the study to understand consumers' online shopping habits across Europe and the globe better. The global survey took place across 13 global markets (Argentina, Australia, Brazil, Canada, China, India, Malaysia, Morocco, Nigeria, South Africa, Thailand, UAE and USA), plus 10 European countries and involved 11,500 participants. The European survey takes deeper dive into 10 European key markets (UK, France, Spain, Germany, Sweden, Poland, Netherlands, Italy, Czech Republic and Austria) and features insights of 5,000 European shoppers.
