

T-shirts, tops and trainers drive UK fashion and footwear purchases

13-03-2019

Royal Mail has looked at shopping trends in fashion and footwear to understand online shopping behaviour in these sectors. With global reach and the number one facilitator of ecommerce in the UK, Royal Mail is well placed to observe trends across the industry.

Fashion trends

T-shirts and tops are the most commonly purchased clothing items. Almost half (46 per cent) of online shoppers purchase t-shirts and tops online. Jeans are also popular and 30 per cent of shoppers are planning on purchasing a pair in the next year.

Social media plays a big part in influencing the purchasing decisions of online fashion shoppers. Almost half (49 per cent) of online shoppers consider social media influential when purchasing clothing and accessories. Digital content about discounts and offers are the most influential (48 per cent), followed by friends' recommendations (42 per cent) and retailer adverts (41 per cent).

The average fashion shopper spends £28 online compared to £27 spent in-store per month*. The average fashion shopper is 46 years old, more likely to be female and live in the suburbs.

Fashion shoppers choose to buy clothing online because they can make purchases in their own time (64 per cent), they are attracted by a wider choice of products (53 per cent) and due to cheaper prices (42 per cent).

The quality of the delivery experience plays a key role in driving customers online. Factors that would encourage customers to shop

more online include delivery tracking (20 per cent) and the option to collect items if they are not in (14 per cent). 42 per cent of shoppers are prepared to pay more for the convenience of a home delivery and 56 per cent would track every item they order, if the service was available.

Footwear trends

Trainers (72 per cent) are the most commonly purchased item of footwear. Sandals (50 per cent), smart shoes (38 per cent) and boots (34 per cent) are also popular.

Peer-to-peer recommendations are crucial in driving purchasing decisions. Almost three in five footwear shoppers consider social media to influence their purchases. Offers (56 per cent) and friends' recommendations (50 per cent) are far more influential than celebrity endorsements (17 per cent) and blogger recommendations (28 per cent).

The average footwear shopper spends £27 online compared to £22 spent in-store per month*. The average footwear shopper is 42 years old, more likely to be female and live in the suburbs.

Footwear shoppers choose to buy online as they can make purchases in their own time (56 per cent), there is a wide range of choice (54 per cent) and cheaper prices (44 per cent).

Again the delivery experience is key. Almost two thirds (64 per cent) of footwear shoppers feel more confident when ordering online with tracking. 59 per cent would track every item they order if the service was available.

A spokesperson for Royal Mail said “For retailers in the fashion and footwear sectors, to be successful it’s essential to understand

the distinct habits of these shoppers. Social media is increasingly influential, especially for younger shoppers, but the recommendation of friends is far more important than celebrity endorsements. Providing as much information as possible is key when it comes to deliveries, with tracking giving customers increased confidence when ordering online.”
